

Tell compelling stories with data visualisation

We've received a lot of interest in our data visualisation course, so we've decided to run our **Package and Present for Data Storytelling** short course each month from March 2018 onwards.

We'll be running our Cape Town and Johannesburg events simultaneously, and the training will take place on **19-20 March** and **17-18 April 2018**.

PACKAGE & PRESENT FOR DATA STORYTELLING

Learn to tell compelling narratives by transforming your data into information and stories that make sense and matter to your audience.

Understanding numbers and sets of detailed information isn't easy for everyone, let alone when you're trying to use that information to tell a story. Anyone who works with data needs to know how to effectively package and present it in ways that make the most sense.

We will cover data storytelling, visualisation, and packaging and presentation – helping you transform your analysis to improve your data storytelling and tell narratives that matter

By the end of the two days, you will be able to take a raw set of data and convert it into a compelling narrative, tailored to suit your audience.
